Title

HP and Gravic Partnership Delivers *HP Shadowbase* Advanced Data Replication Solutions for Business Continuity, Data and Application Integration, and Audit Compliance Requirements

Abstract

HP now licenses, sells, services, and supports Gravic's leading-edge Shadowbase solutions that address data replication for business continuity and heterogeneous data and application integration requirements. We provide a single point of purchase and support for these advanced replication solutions so that our customers benefit from the global reach, industry expertise, and 24x7 support available from HP. In a business continuity environment, **HP Shadowbase** solutions extend localized HP NonStop server fault-tolerance to the geographic fault-tolerance required by mission-critical enterprise applications, from active/passive on up through sizzling-hot-takeover to fully active/active architectures. **HP Shadowbase** also provides heterogeneous data replication between a variety of platforms and databases, including HP NonStop, Oracle, SQL Server, MySQL, DB2, and Sybase. In addition, **HP Shadowbase** utilities provide tools for restoring corrupt databases, and helping to meet audit compliance requirements. As our customers architect next-generation solutions, we deliver advanced data replication and integration capabilities across heterogeneous platforms, including zero application downtime solutions for upgrades and migrations.
