Thomas Burg

**Title**

**Hybrid is today! InfiniBand-Enable your applications**

**Abstract**

HPE has announced the Yuma project which allows NonStop systems to exchange data with Linux systems using InfiniBand.

This goes well in line with the push towards a "Hybrid" Infrastructure where processing load and application architecture is shared among these two platforms.

In this presentation, comForte will explain why Hybrid could in fact matter to you, what speed gains are to be expected with Infiniband and finally how comForte products can make Hybrid application matter for you.
