Hewlett Packard Enterprise

Title

HPE supports Gaia-X goal that fits with our edge-to-cloud platform as a service vision

.

Abstract

As data economy is ramping up in Europe and cross the world, there is a need to think differently of cloud that should become distributed while being pillars for accelerating value creation in ecosystems in inclusive, open, secure and transparent ways. For that purpose, HPE released a comprehensive end to end zero trust architecture compliant with Gaia-X principles including Built-in technical "trust chain" across infrastructure, operating systems and workloads, combining cloud security and sovereignty features and aimed at all players across sectors, especially the public, healthcare, finance and sensitive industries.

Speaker Biography

Xavier Poisson advocates economic growth through innovation, community development, and decentralized, data driven, sovereign while federated National Clouds. In his role as Global Vice President for Service Providers he leads the overall sales, marketing and program of HPE's worldwide network of service providers and colocation providers that deliver the off-premises IT element of HPE's "Everything-as-a-Service" strategy. A long-time proponent of open communities, sustainable IT, data sovereignty, European and pan Africa cloud initiatives, Xavier is an active contributor to creating the HPE GAIA-X principles compliant architectures for Service Providers, as he leads HPE efforts with Gaia-X AISBL. Xavier currently serves as a board member for EuroCloud France where he leads the Sustainability for Cloud commission he has created. Xavier also leads HPE efforts with Smart Africa aiming at building a single digital market in the continent, and where is the vice chair of Private Sector members representation.
