Network Technologies International, Inc.

Title

Resilience: Fueling NTI's Continuous Adaptation

Abstract

NTI continues to unveil its DR*Net*®/Unified product suite. This product suite continues to grow with the latest edition being DR*Net*®/Unified for GoldenGate Conversion.

Having absorbed the dramatic changes to NonStop taking place – from x86 to virtualization to hybrid IT together with support of development in the clouds – followed by an adapting product portfolio bringing with it the modernization transformation that only NTI can deliver, Business Resilience is greatly assured.

The message of Continuous Adaptation demonstrates how Data Replication for Business Continuity, Data Integration for Business Insight, Data Distribution for Business Cooperation and Data Transformation for Business Opportunity, all contribute to a Resilient NonStop environment.

For NTI, Continuous Adaptation is fueling its expanding business endeavors. As enterprises continue their data transformation journey, embracing hybrid IT, virtualization and clouds and look to improve Resilience, participants in this session will hear more about the value that comes with DR*Net*®/Unified.
