### **Title**

HPE Virtualized NonStop Continues the Journey to the Cloud

### **Abstract**

HPE Virtualized NonStop (vNS) systems have been deployed by several customers on private VMware clouds in recent years to run their mission-critical production workloads. However, a growing number of NonStop customers has expressed interest in a generalized vNS solution that can also be deployed in public clouds. This session provides an update on the significant progress achieved by the HPE NonStop R&D team towards this goal.

### **Speaker**

Arun Fernandes, Director NonStop Engineering
