Title

**Advanced Data Resilience and Recovery for Mission Critical Systems
with HPE Shadowbase Software**

Abstract

Learn about the HPE Digital Resilience Framework and the solutions that help protect and recover mission critical HPE NonStop server data from Ransomware and Malware attacks. We will discuss new regulations, such as DORA, and key best practices, like data validation and the 3-2-1-1 backup rule. We will also review different architectural options, including air-gapped systems and bare-metal recovery from immutable storage that enable rapid data recovery with transactional consistency to a trusted state.

Speaker

Kenneth Scudder, VP Global Business Development
