Abstract Presentation
10 April 2024 - 14.00 h

Hewlett Packard Enterprice

Title

HPE NonStop systems management using Azure DevOps and Ansible and a live patching & reconfiguring "Safepoint" demo , presented by ING.

Abstract

DevOps is 'hot' and many companies are embracing the concept, either full blown or just by tipping their toes in the water. NonStop can very well be integrated into a DevOps environment/eco-system, but there are many options and choices to be made, this presentation and a live demo of patching and reconfiguring the ComForte Safepoint products as well, is meant to discuss the why and how and share with each other what works and what doesn't.

ING is one of the frontrunners adopting DevOps, including on NonStop, in this session they will share their experiences.

Speaker

Jeroen Wallaard, CTO / Infrastructure & Engineering / GITEO / Local NL
