Title

SCI Experience since the dawn of OpenVMS on x86

Abstract

As the first site outside of VSI to run OpenVMS on the X86 platform, SCI has been in the X86 game since the beginning. SCI has ported our internal applications as well as several customer applications to run on the X86 OpenVMS environment. SCI builds code with multiple languages both native and using the cross-build environment. SCI's extensive monitoring components run on X86 and have been updated where applicable.

This session will discuss our experiences from compiling and linking applications before OpenVMS was available through running production compilers on OpenVMS V9.2-2 on our X86 based systems. Various bugs, porting experiences, and the overall close relationship with VSI during these early years will be covered..
