Title

Smart Manufacturing with HPE GreenLake powered by abat+

Abstract

INEOS, a car manufacturer in France, relies on abat software embedded in HPE Greenlake to produce the new INEOS Grenadier.

A vision needs the best technology and strong partners. The newly designed INEOS Grenadier is produced in the specially equipped plant in Hambach, France, using state-of-the-art methods and completely digitally. This is made possible by software from the St. Ingbert-based software company abat+ GmbH and HPE Greenlake.
