Title

NonStop, Evolution through Modernisation

Abstract

We, at TCM's Center of Excellence, are a strong believer in the saying that 'Any application is legacy the day it goes to production'. That being said, we often hear the challenges that customers and users face on the NonStop almost always seem exclusive to the legacy nature of their application. So, our R&D division embarked on a little thought experiment of their own. Did you know that the Guardian Operating system comes packed with products and features that enable modernization out of the box? Whether it is open source or enterprise supported industry standard tools, there's a place for everything on the NonStop modernization story. Come with us on a journey as we delve into the intricacies of strategizing the future of your NonStop application, laying bare the complicated buzz words that would otherwise put you off upgrading your tech stack. Let us show you how many different paths you can take on your transformative journey using real-world examples and practical insights, we developed different approaches that are meticulously tailored to address specific aspects of the application, effectively bridging the gap between legacy systems and modern practices.
