The next wave of the internet

Internet of Information

Everyone is sender and receiver of **information**

Internet of Things

Everything is sender and receiver of **information**

Internet of Value

Everyone and **everything** is sender and receiver of **value**

*“By 2025, the business value added by blockchain will grow to slightly over **\$176 billion**, then surge to exceed **\$3.1 trillion by 2030.**”⁽¹⁾*

*“By 2030, **30%** of the global customer base will be made up of things, and those things will use blockchain as a foundational technology with which to conduct commercial activity.”⁽¹⁾*

The next wave of the internet and their phases of adoption

Internet of Value

Everyone and **everything**
is sender and receiver of
value

Blockchain 1.0: People transacting with People

Consensus Mechanism

Proof of Work

Proof of Authority

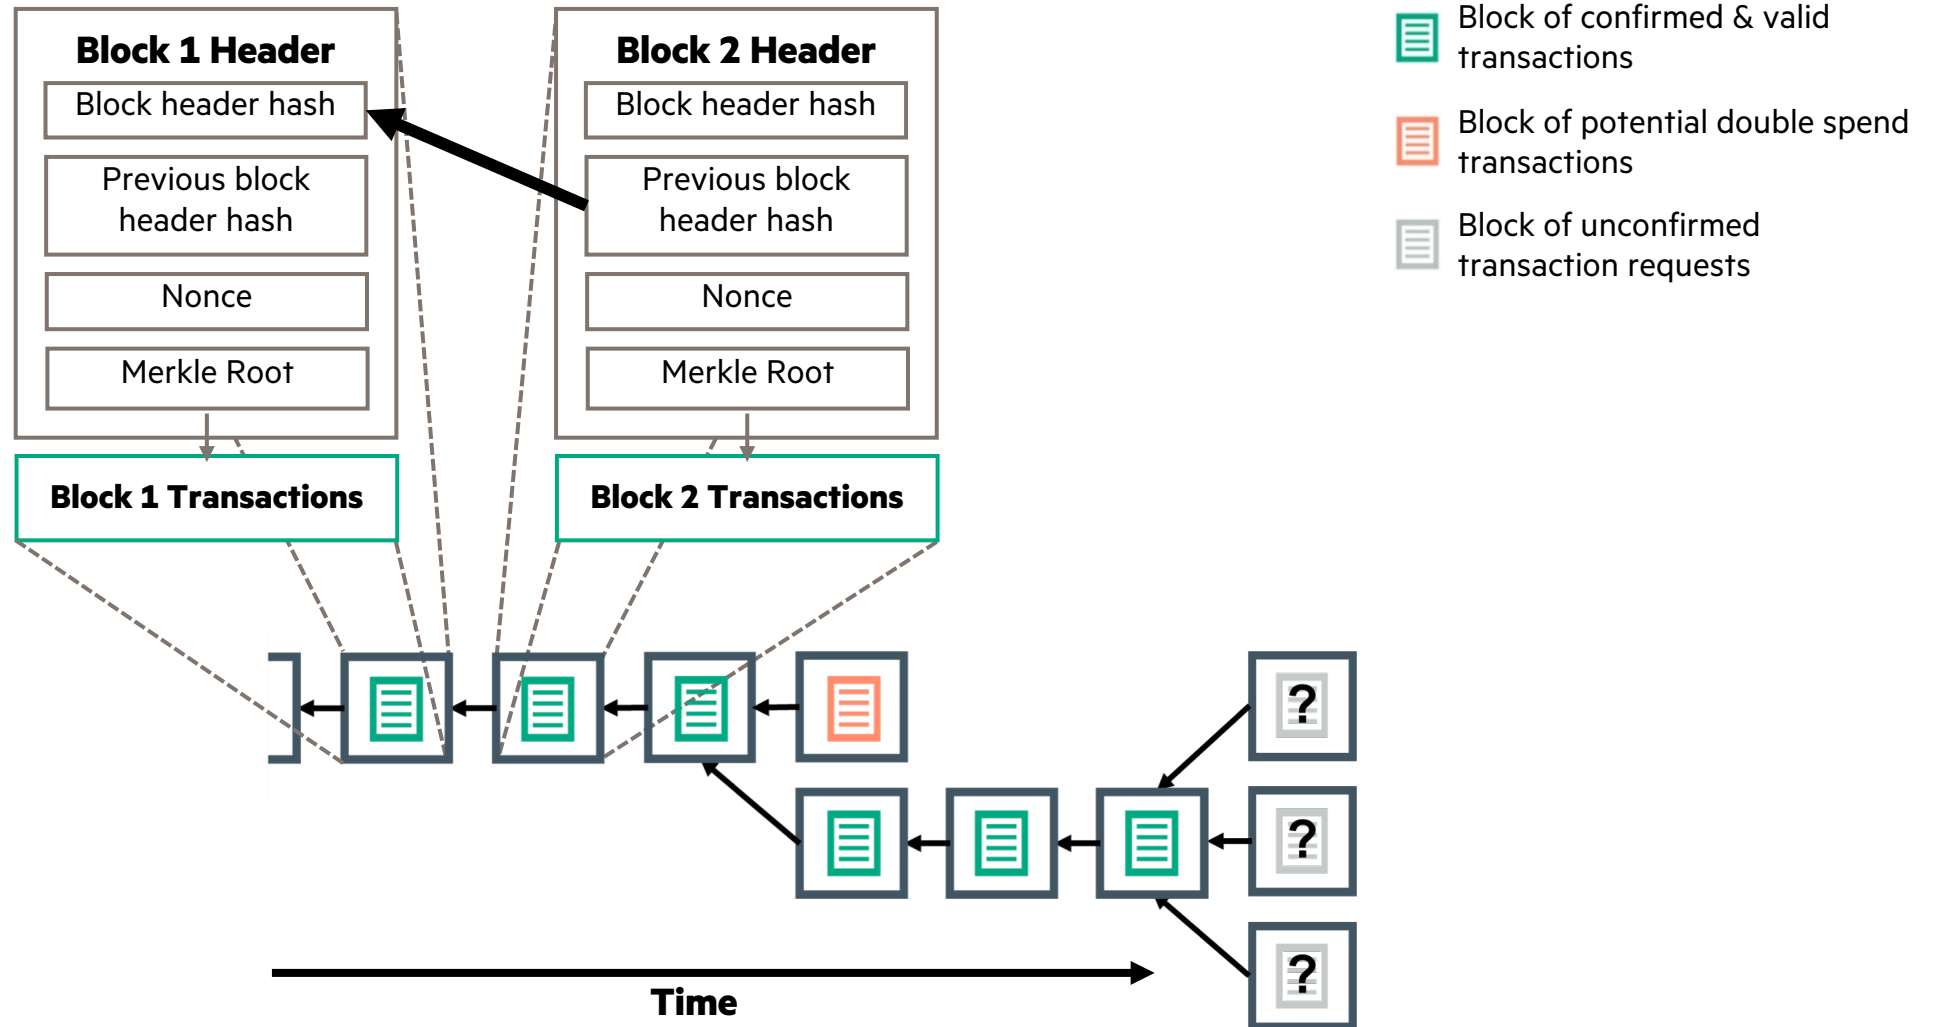

Blockchain automatically establishes the essentials necessary for any transaction

Trust

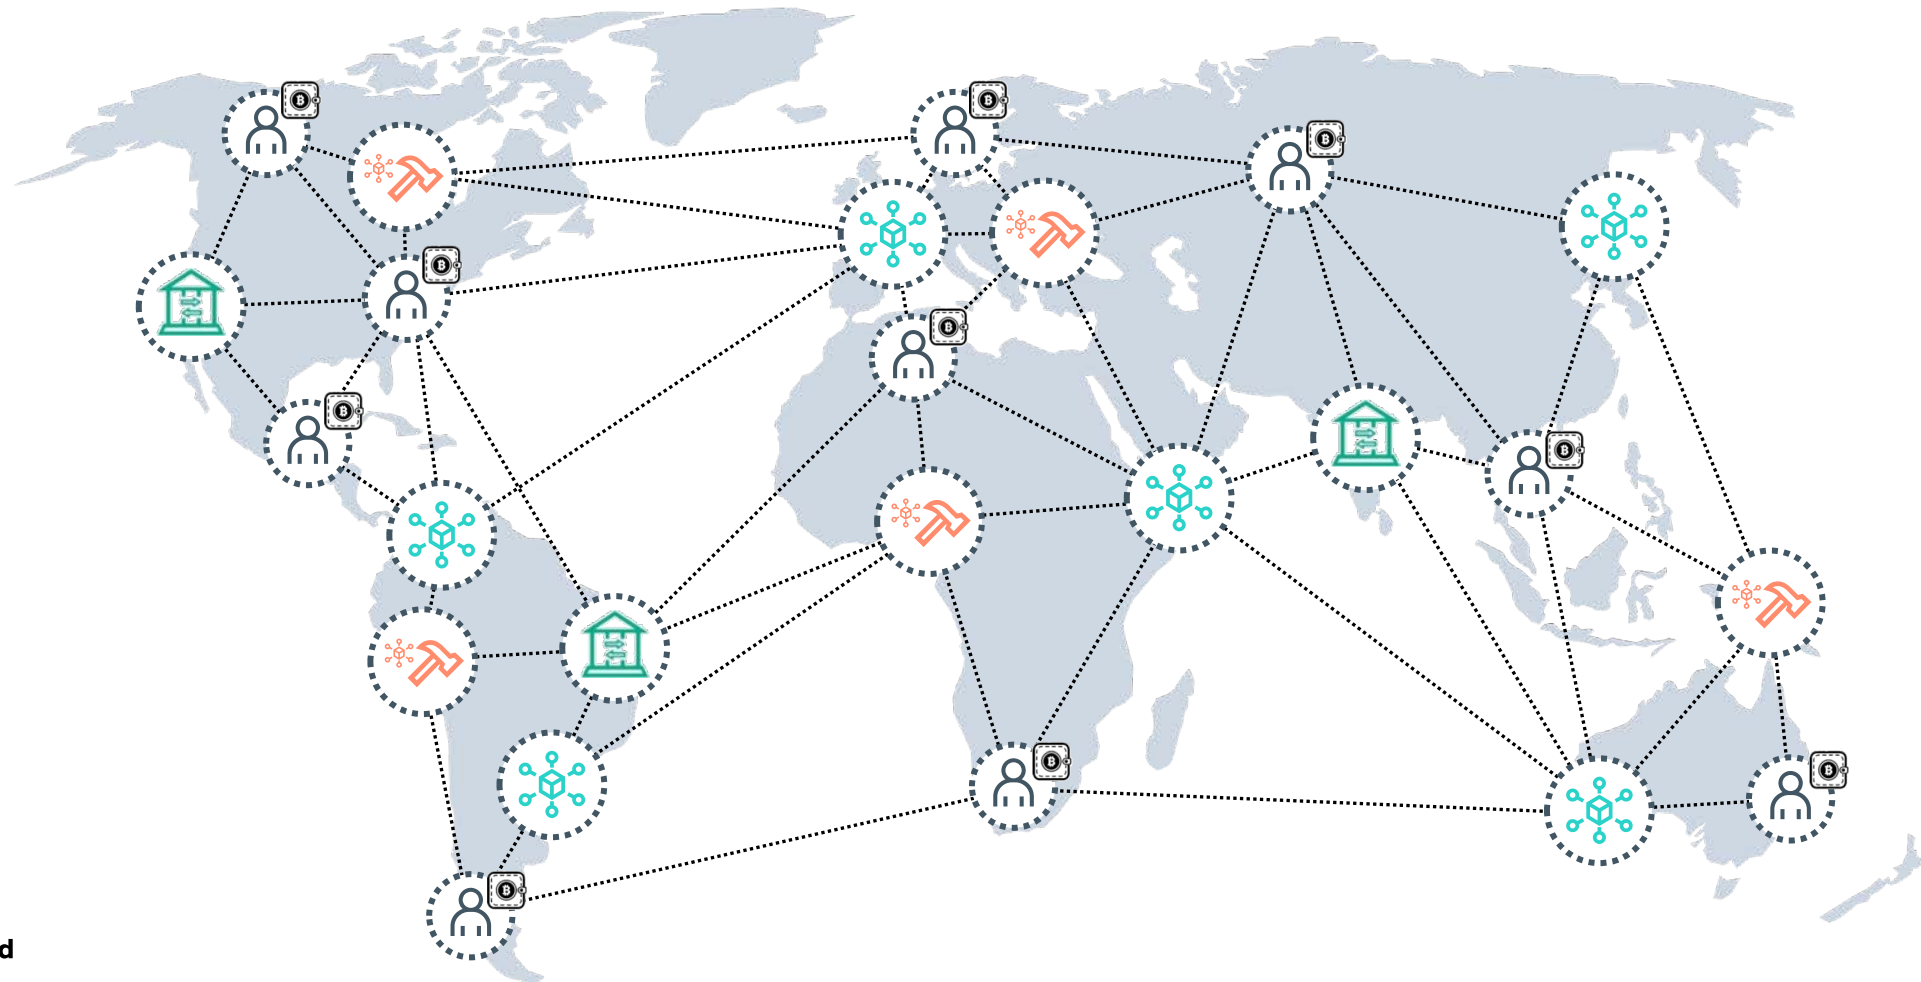

+

Single set of facts

Why is it called a Blockchain?

Blockchain Ecosystem

Blockchain is a fundamental shift in how business is transacted

Increases innovation

Lowers barrier to entry and increases competition from new entrants, generating greater business value

Reduces operation costs

Blockchain lowers operating costs, improves efficiency, and reduces transaction cycle times

Creates new business models

Blockchain will bring to life new business models and shift how business is done

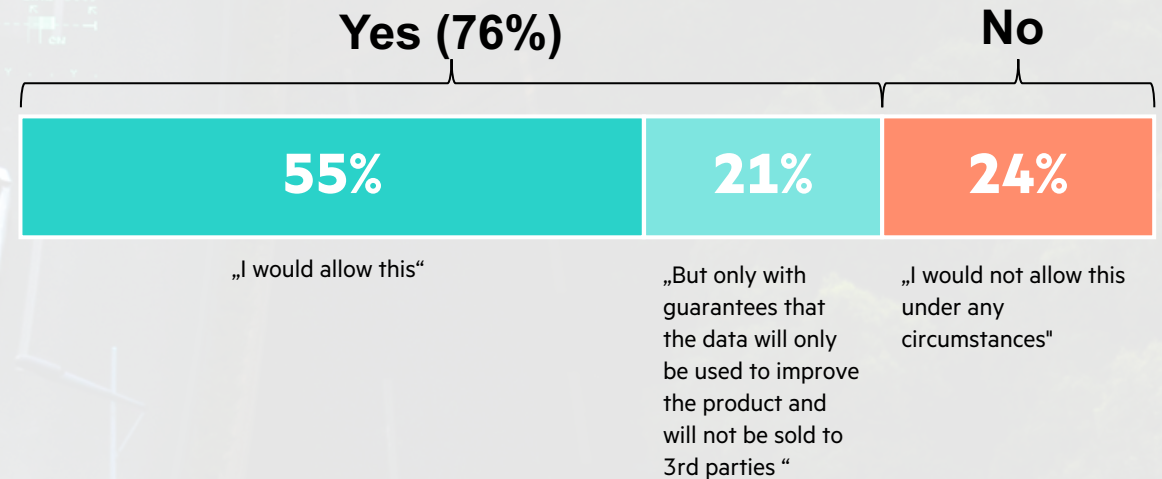

Willingness to share personal data

PAYBACK

- Start in Germany: **2000**
- Active PAYBACK users in Germany: **30 Mio.**
- Usage (scan at checkout): **≈ 4 Mio. / Day**
- Intensify revenues from purchases (2017): **29,8 Mrd. Euro**
- PAYBACK App Downloads: **14,5 Mio.**
- Participating partners (off-, online & mobile): **>650**

Would you allow your car to track your location and report it anonymously, e.g., to enable your carmaker to improve the next generation of your car?

“Decentralized public blockchains are the only way by which enterprises will truly and deeply commit to digitizing their products and services in a fully interoperable manner.” ¹

**Vehicle data revenue
~350,-€ per car/ year ²**

“Most of the disruptive technologies were illegal when they started – Skype was partially illegal” ³

“Because blockchains benefits come from decentralization there is little point replacing one technology with another without changing the business model.” ⁴

¹ P. Brady, Ernst & Young, 2018 ² BMWI, 2017 ³ Dr. Jutta Steiner, Pacity Technologies ⁴ R. Crook, Royal Bank of Scotland, 2018

Monetization of sensor data puts Blockchain at the edge

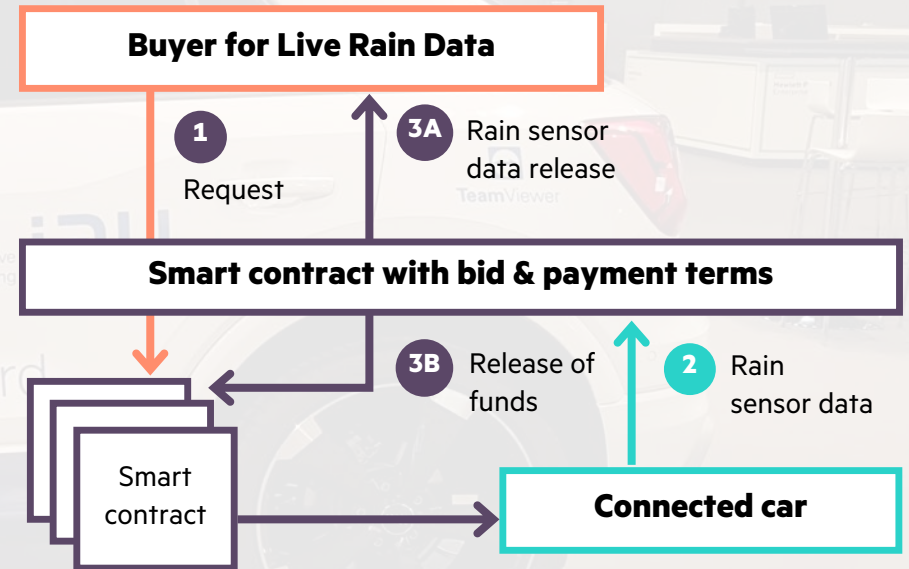

Rewards for sensor data in connected cars

Blockchain 3.0 (IoT use case)

In a connected car, HPE demonstrated a blockchain solution enabling monetization of sensor data, laying the foundation for a full ecosystem

Drivers

- Data is the new currency, and in the hands of a few global ‘brokers’
- The number of sensors & sensor data is increasing exponentially
- People are willing to share their data for perks
- Data stewards control and secure the data (do not necessarily have authority to use)

Challenges to Blockchain adoption

Customers struggle to adopt Blockchain as a solution

The current set of platforms are not enterprise-ready

- Immature offerings
- Unproven for mission-critical applications
- Limited scalability
- Lack resiliency and proper security features

Broader adoption is slow due to protocol uncertainty

- Lack of industry standards
- Long-term impact of regulation is unknown
- Financial and technical stability of platforms/startups
- Governance in a decentralize operating model

HPE is providing enterprise-ready Blockchain solutions

Enterprise-grade solutions

Designed and implemented for large business transactions and mission critical operations across people, processes and technology

Accelerate with confidence

Faster time-to-value with simplified advisory services to securely implement Blockchain innovations

Scale to meet demands

Meet requirements of unique business operations, driving financial and business growth

A network of partners to deliver complete Blockchain solutions

HPE Pointnext services help you on your Blockchain journey

Explore

HPE Blockchain Transformation Workshop is a one-day interactive session designed to help customers understanding blockchain outcomes and challenges, align to a vision and strategy and identify best use cases and technologies

Experiment

HPE Blockchain Platform Assessment and HPE Blockchain Proof-of Value will gather and validate your use cases, demonstrate technology capabilities and provide a proof-of-value for select use case

Evolve

HPE Blockchain Implementation to get you up and running with your blockchain solution: design & implement production-ready system, manage change and train teams and help you evolve for additional use cases

Partnerships support full integration of blockchain solutions

Mission Critical Distributed Ledger Technology (DLT)

Integration of R3 Corda and HPE's Mission Critical NonStop platform

Available as-a-service and on premise

Designed specifically to address the functional and non-functional requirements of enterprise customers

R3 Corda is meeting functional requirements for decentralized business models

- Record, manage and synchronize nodes
- Contracts between trading partners
- Uses distributed ledgers
- Privacy matters – data is shared only between parties who need to know

An enterprise ready solution powers HPE's Mission Critical technology

- Resilient and linear scalability
- Integrated fault-tolerant SQL/MX database
- Highly secure platform
- Empowered by HPE Pointnext services

Delivering Enterprise-grade Blockchain at scale

Infrastructure for fundamental customer needs, while leveraging Blockchain platforms of today

Customer Challenge

Current set of platforms are not enterprise-ready

- Resiliency for mission critical applications
- Scalability
- Performance for industrial use cases
- Security

Fragmented landscape and platform uncertainty is a barrier to adoption

Solution:

Blockchain 2.0 (Enterprise Use Case)

Enterprise-grade NonStop infrastructure optimized to run R3 Corda charted a clear path to production

Resiliency and linear scalability enhancements that improve production readiness of the solution

Partnered with the customer to lower the risk of their incubation effort

Why HPE?

Deep expertise

- #1 trusted platform for Mission Critical workloads
- Integrated partner ecosystem ranging from emerging companies to industry leaders
- Dedicated HPE Blockchain team

Built for the enterprise

- HPE believes blockchain will be a foundational technology for enterprises
- Integrates with Hybrid IT operating models
- Designed for the requirements of Enterprise IT
- HPE investing to drive Blockchain innovation across our business

Industry leading services

- HPE Pointnext end-to-end services driving Blockchain solution for customers
- Hybrid IT delivery models
- Consumption models will be available
- Expansive experience designing, building and running Enterprise IT

HPE Transformation Workshop for Blockchain

The starting point on your journey – educating and aligning the business

The workshop consists of six sequential slides, each with the HPE POINTNEXT logo in the top left corner:

- Introduction to Blockchain:** Explains Private Blockchain (permissioned) and Public Blockchain (permissionless), compares Central transaction validation vs. Decentralized transaction validation, and lists reasons to focus on blockchain today.
- Background to Blockchain:** Shows a circular diagram of blockchain components and a timeline of history from 2008 to 2017.
- Business opportunities:** Lists vertical industry use cases (Healthcare, Manufacturing, Education, etc.) and outlines business goals: Reduce COST, Increase REVENUE, and Create VALUE.
- Journey to adoption:** A flowchart showing the path from 'Your journey to Blockchain' through 'Value add of Blockchain' to 'Consider regulatory/legal environment'.
- Security considerations:** Lists security risks (e.g., 51% attack) and provides examples of blockchain security solutions like Guardtime and Chainalysis.
- Transformation journey:** A process flowchart showing the transition from 'When to consider Blockchain?' to 'Essential reference architectures'.
