Title

How to Build an Application with 99,99999% Availability

Abstract

The OmniPayments Financial Transaction Switch thrives within the demands of a 24x7 world. It delivers real-time, continuously available payments services that optimize each user interaction for OmniPayments' financial and retail customers. Our Switch doesn't deliver five or six 9s availability. Instead, we offer the competitive edge of seven 9s availability - only 3.1536 seconds of downtime per year. Whether our clients take advantage of our standalone Switch or a pay-for-use instance in OmniCloudX, available to them is our entire suite of flexible solutions, all built on a secure, active/active architecture. OmniPayments systems in production today process 1 billion transactions per month via ATMs, point-of-sale (POS) systems, and web/mobile applications. How we succeed in this 24x7 environment is the focus of our presentation.
